Professional Summary

Staff Engineer with **14+ years** owning end-to-end solution architecture for enterprise platforms—API services, event-driven integration, data access, security, observability, and operational readiness. At Dish Network, own architecture for the subscriber-facing microservices platform serving **10M+ subscribers** on Rancher-managed Kubernetes. Promoted **Lead** → **Staff** for org-wide Spring Boot 3 migration, Snyk security standards, and engineering practices adopted across **3+ teams**. Mentor **8 engineers (3 promotions)**; lead architecture reviews, incident response, and senior/staff hiring. Hands-on in Java/Spring Boot REST APIs, OpenAPI, Kafka/event-driven patterns, cloud-native delivery, and quality gates. Regularly leverage Kiro for architecture analysis, automated documentation/flow-diagram generation, and subagent-based code workflows with cross-session AI memory persistence. Introduced AI-powered Spring Boot modernization to Dish leadership—presented live demo of Kiro spec-driven development, automated code generation, and subagent orchestration to VP+ engineering leadership.

Technical Skills

Languages: Java, Kotlin, JavaScript, TypeScript, Python, SQL

Backend & APIs: Spring Boot 3, Spring Cloud, Hibernate, REST APIs, OpenAPI/Swagger, Resilience4j, Liquibase, Maven

Architecture & Integration: Microservices, Event-Driven Architecture, Kafka, RabbitMQ, API Gateway, Circuit Breaker, Service Mesh (Istio/Consul), GraphQL,DDD, ADRs

Frontend & Mobile: ReactJS, Next.js, React Native, Android SDK — guide React/API integration patterns

Data: PostgreSQL, SQL, Oracle, MongoDB, DynamoDB, GemFire (distributed cache), Firebase

Cloud & Platform: Docker, Kubernetes (Rancher, K8s), AWS (S3, DynamoDB, EKS), GCP, Azure (AKS), Terraform (IaC), Helm, Azure networking (VNet, Key Vault, Private Link)

DevOps, Security & Quality: GitLab CI/CD, Jenkins, GitHub Actions, Snyk, Dynatrace, Prometheus, ELK, PagerDuty; quality gates in CI; JUnit, Selenium, Postman, API & performance testing; Chrome DevTools Protocol (CDP) for browser automation and AI-integrated debugging

AI & Automation: Kiro (spec-driven dev, hooks, subagents, EARS), MCP integrations (GitLab, Jira, GitHub), custom agent skills (defect-fix / test-gen / code-review), LLM workflows, AI-augmented SDLC (AI code review, automated test generation, spec-to-code traceability, AI observability)

Professional Experience

Dish Network Technologies | Staff Engineer (promoted from Lead)

May 2022 – Present

- Own platform architecture and engineering standards across API services, caching, CI/CD, security scanning, observability, and runbooks—ensuring consistency, scalability, and production readiness across multiple product teams.
- Promoted **Lead** → **Staff** for org-wide impact: authored Spring Boot 3 migration guide adopted across platform services; drove Snyk adoption across **3+ engineering teams**; pioneered AI-assisted workflows used by **50+ engineers**—Kiro spec-driven development, subagent orchestration, automated documentation and flow-diagram generation, and MCP-server agent skills for end-to-end automation. Spearheaded AI-augmented SDLC: integrated AI code review bots into GitLab CI/CD pipeline, automated test generation from Kiro specs, achieving **25%** faster PR merge cycle and **30%** defect reduction in production. Presented live demo of AI-powered Spring Boot modernization to VP+ leadership, showcasing Kiro spec-driven development and automated code generation capabilities.
- Lead architecture across **3+ product teams (20+ engineers total)**; mentor **8 engineers (3 promotions)** to senior/staff; maintained **90%+ team retention rate**; established architecture review board for platform services; lead on-call incident response with post-mortems and runbooks.
- Annual Technical Excellence Award** (2025, 2024) · **Spot Award** (2025, 2023) · **CPAW Award** — recognized for platform reliability, security posture, and delivery impact.

My Dish App – Subscriber Platform | Java, Spring Boot 3, Spring Cloud, REST, OpenAPI, GemFire, Kafka, K8s

- Architected enterprise REST microservices (API-first / OpenAPI) for the flagship subscriber platform serving **10M+ subscribers**—maintaining **99.9% uptime** with sub-second API latency; defined integration patterns across frontend, backend, and shared platform services.
- Led migration to **GemFire** distributed caching—reduced data-access latency and offloaded database read load; guided teams on data access patterns, performance, and reliability trade-offs (SQL/NoSQL and cache-aside).
- Established event-driven integration patterns using **Kafka** and **RabbitMQ** for async workflows and service decoupling; improved resilience with circuit-breaker patterns and API gateway routing.

- Drove **Spring Boot 3** migration across platform services—migration guide, guardrails, paired remediation of breaking changes; improved startup/GC behavior and unblocked security patching.
- Integrated **Snyk** into GitLab CI/CD with exploitability-based triage; shortened critical vulnerability exposure from multi-day windows to same-day remediation.
- Built observability and operational readiness: Dynatrace APM, distributed tracing, PagerDuty alerting, documented runbooks, and CI quality gates (JUnit/Postman **85%+ coverage**) as release prerequisites.

Sling TV Product Development | *Java, Spring Boot, Ruby on Rails, Microservices, AWS, Amazon Q, New Relic*

- Directed a globally distributed engineering organization (US + India) across **5 squads**; drove delivery predictability by mapping cross-team dependencies, clearing blockers, and establishing escalation paths for execution risks.
- Led strategic transformation of **80+ legacy Ruby on Rails APIs** into modern, scalable Java microservices architecture—achieved **50% faster delivery timeline** by driving API-first patterns and event-driven design.
- Orchestrated end-to-end integration of **Apple Pay** and **Google Pay** payment ecosystems, driving direct organizational revenue growth.
- Spearheaded GenAI modernization: leveraged Amazon Q to auto-reverse-engineer **400K+ lines** of legacy code, auto-generate **2M+ lines** of code and **10K+ automated unit tests** (maintaining **85% coverage**); achieved **70% productivity gain**.
- Restructured global delivery models, empowering offshore teams in India to take full ownership of feature execution, significantly increasing throughput and operational readiness.

Paperless Agreement & STB Health | *Spring Boot, REST, real-time monitoring*

- **Paperless Agreement:** Led ColdFusion → Spring Boot microservices migration; eliminated chronic production failures and stabilized subscriber onboarding company-wide.
- **STB Health Monitor:** Real-time dashboards and REST APIs for Set-Top-Box telemetry across **10M+ devices**, enabling proactive ops before subscriber impact.

In-Home Service Catalogue & Internal Tools | *Kotlin/Android, Spring Boot, React/Next.js*

- **Field catalogue:** Offline-first Android app—**40%** lower data usage; contributed to **60%** increase in on-site technical sales; CMS cut content turnaround **70%** (weeks → hours).
- **Internal tools:** Asset Management, Shift Allowance, Seat Booking (containerized, Dynatrace). Asset Management won **Codefest 2023**, **70%** less manual effort, company-wide adoption; guided React/Next.js + Spring REST integration.

Kiro Mobile – AI DevOps Command Center | *React Native, WebSocket, GitLab API, Dynatrace API*

- Built a mobile command center for AI coding tasks—WebSocket live updates, GitLab MR status, and Dynatrace alerts; track AI coding quality metrics (spec drift, test coverage delta, remediation success rate); adopted by **50+ engineers** at Dish.
- Authored MCP servers (GitLab, Jira) and agent skills (defect-fix, test-generation, code-review) for end-to-end incident remediation; presented at **Dish Ignite 2026**.

MSys Technologies (now Aziro) | Technical Architect / Lead

Feb 2012 – May 2022

- Progressed **Software Engineer** → **Senior** → **Tech Lead** → **Technical Architect** over 10 years serving US clients (Pivot3, Nasuni, NetApp) in storage, virtualization, and cloud.
- Led teams of **3–8** engineers; owned scoping, architecture, demos, and delivery. Grew Pivot3 engagement from 3 to 6 engineers via delivery quality and scope expansion.
- **Best Performer of the Year** (5x: 2013, 2014, 2016, 2018, 2019) · **Blog Championship Award** (2017)

Pivot3 – VMware HCI Platform | *Java, REST, ReactJS, vRealize*

- Technical Lead for VMware integration: backend REST APIs, ReactJS vSphere UI plugin, and vRealize Orchestrator automation for bulk HCI volume provisioning (**1000+ volumes**)—**60%** reduction in manual provisioning effort.
- Partnered with US product stakeholders on roadmap, architecture reviews, and release delivery; translated requirements into scalable technical designs.

Enterprise Mobile & Test Automation | *Android, Firebase, Selenium*

- Led 3 engineers shipping Nasuni and Spree Wearables Android apps (Play Store) with Firebase sync and analytics for crash/engagement monitoring.
- Built Mobitaz mobile test automation (record/playback) for client demos; delivered NetApp Selenium regression suite covering **100+ scenarios** and cutting manual regression effort by **50%**.

Education

Anna University – SIT, Tamil Nadu | *Bachelor of Information Technology*

Certifications

Google Cloud Professional Data Engineer
