Professional Summary

Staff Engineer with **14+ years of experience** owning end-to-end solution architecture for enterprise platforms, including API services, event-driven integration, data access, security, observability, and operational readiness. At Dish Network, own architecture for the subscriber-facing microservices platform serving **10M+ subscribers** on Rancher-managed Kubernetes. Promoted from **Lead to Staff (Solution Architect)** for org-wide Spring Boot 3 migration, Snyk security standards, and engineering practices adopted across teams. Mentor engineers and lead architecture reviews, incident response, and senior/staff hiring. Hands-on in Java/Spring Boot REST APIs, OpenAPI, Kafka/event-driven patterns, cloud-native delivery, and quality gates, AI-augmented SDLC, and AI governance practices. Regularly leverage AWS Kiro for architecture analysis, automated documentation/flow-diagram generation, and subagent-based code workflows with cross-session AI memory persistence. Introduced AI-powered Spring Boot modernization to Dish leadership by presenting a live demo of Kiro spec-driven development, automated code generation, and subagent orchestration to VP+ engineering leadership.

Technical Skills

Languages: Java, Kotlin, JavaScript, TypeScript, Python, SQL

Backend & APIs: Spring Boot 3, Spring Cloud, Hibernate, REST APIs, OpenAPI/Swagger, Resilience4j, Liquibase, Maven

Architecture & Integration: Microservices, Event-Driven Architecture, Kafka, RabbitMQ, API Gateway, Circuit Breaker,DDD, ADRs

Frontend & Mobile: ReactJS, Next.js, React Native, Android SDK, and API Integration Patterns

Data: PostgreSQL, SQL, Oracle, MongoDB, DynamoDB, GemFire (distributed cache), Firebase

Cloud & Platform: Docker, Kubernetes (Rancher), GCP, AWS, and Multi-Cloud Architecture (Azure/AKS)

DevOps, Security & Quality: GitLab CI/CD, Jenkins, Snyk, Dynatrace, Prometheus, ELK, JUnit, Selenium, Postman, API & performance testing

AI & Automation: Kiro (spec-driven dev, hooks, subagents, EARS), MCP integrations (GitLab, Jira, GitHub), custom agent skills (defect-fix / test-gen / code-review), LLM workflows, AI-augmented SDLC (AI code review, automated test generation, spec-to-code traceability, AI observability)

Professional Experience

Dish Network Technologies | Staff Engineer (promoted from Lead)

May 2022 – Present

- Winner of the **Annual Technical Excellence Awards** (2024, 2025) · Recipient of the **Spot Awards** (2023, 2025) · **CPAW Award** recipient, recognizing contributions to platform reliability, security posture, and delivery impact.

My Dish App – Subscriber Platform

- Architected enterprise REST microservices (API-first / OpenAPI) for the flagship subscriber platform serving **10M+ subscribers** to maintain **99.9% uptime** with sub-second API latency, and defined integration patterns across frontend, backend, and shared platform services.
- Drove the Spring Boot 3 migration across platform services using Kiro spec-driven modernization, automating the remediation of breaking changes across **50K+ lines of code** to achieve a **60% productivity gain**, and built a custom dashboard to track AI-committed code changes.
- Leveraged spec-driven AI workflows to accelerate backend feature development, delivering high-quality microservices with automated spec-to-code traceability.
- Established security and operational gates by integrating a custom **Dynatrace MCP server** for automated incident analysis, distributed tracing, and a **Snyk MCP server** paired with **Kiro agents** to scan and remediate vulnerabilities (achieving same-day fixes), while mandating **85%+ JUnit/Postman coverage**.

Sling TV Product Development

- Led the strategic transformation of **80+ legacy Ruby on Rails APIs** into a modern, scalable Java microservices architecture, achieving a **50% faster delivery timeline** through API-first patterns and event-driven design.
- Orchestrated end-to-end integration of **Apple Pay** and **Google Pay** payment ecosystems, driving direct organizational revenue growth.
- Spearheaded GenAI modernization by leveraging Amazon Q to reverse-engineer **400K+ lines** of legacy code and scaffold **2M+ lines** of Java microservices and **10K+ unit tests** (maintaining **85% coverage**), achieving a **70% productivity gain**.
- Restructured global delivery models, empowering offshore teams in India to take full ownership of feature execution, significantly increasing throughput and operational readiness.

Dish Paperless Agreement (DPA), STB Health & Field Catalogue

- **Dish Paperless Agreement (DPA):** Led the migration of the paperless onboarding system from ColdFusion to Spring Boot microservices, enabling field agents to sign agreements, cross-sell services, and activate equipment offline while orchestrating agreements through 23 integrations and 7 SFTP distribution targets.
- **STB Health Monitor:** Real-time dashboards and REST APIs for Set-Top-Box telemetry across **10M+ devices**, enabling proactive ops before subscriber impact.
- **Field Catalogue:** Offline-first Android app with **100%** offline capability, enabling catalog access in remote areas with zero connectivity and contributing to a **60%** increase in on-site technical sales; earned appreciation from the **Sales VP**, while the integrated CMS sync cut catalog update delivery time from weeks to minutes.

Asset Management & Shift Allowance – Internal Tools

- **Asset Management (Won Codefest 2023):** Architected and built a full-stack system (Spring Boot, ReactJS) during a hackathon, containerizing it (Docker, Portainer) to deploy on internal VMs via JFrog, which automated tracking to cut manual effort by **70%** and achieve company-wide adoption.
- **Shift Allowance:** Developed a full-stack portal (Spring Boot, ReactJS) that automated long-term manual Excel workflows to secure an **HR Spot Award**, now used company-wide by all DISH employees for shift allowance requests and payroll approvals.

Kiro Mobile & Custom Agent Skill Development (Dish Ignite 2026 Showcase)

- Developed a lightweight mobile interface to monitor and control Kiro IDE agent sessions from a phone over LAN, featuring a live preview of chat, tasks, and code via Chrome DevTools Protocol, which was showcased at **Dish Ignite 2026**.
- Created custom agent skills to manage and orchestrate MCP integrations (GitLab, Jira, GitHub) to automate end-to-end software delivery, including defect resolution, test generation, and automated PR/MR creation.

MSys Technologies (now Aziro) | Technical Architect / Lead

Feb 2012 – May 2022

- Progressed from **Software Engineer to Senior, Tech Lead, and Technical Architect** over 10 years serving global enterprise clients (Pivot3, Nasuni, NetApp) in storage, virtualization, and cloud.
- Led engineering teams while owning scoping, architecture, demos, and delivery, successfully expanding client engagements.
- **Best Performer of the Year** (5x: 2013, 2014, 2016, 2018, 2019) · **Blog Championship Award** (2017)

Pivot3 – VMware HCI Platform

- Served as Technical Lead and Full-Stack Developer for VMware integration, delivering backend REST APIs, a ReactJS vSphere UI plugin, and vRealize Orchestrator automation to achieve a **60%** reduction in manual provisioning effort for **1000+ volumes**.
- Partnered with global product stakeholders on roadmap, architecture reviews, and release delivery, translating requirements into scalable technical designs.

Enterprise Mobile & Test Automation

- Led the development and launch of Nasuni and Spree Wearables Android apps (Play Store) with Firebase sync and analytics for crash/engagement monitoring.
- Built Mobitaz mobile test automation (record/playback) for client demos, and delivered a NetApp Selenium regression suite covering **100+ scenarios** to cut manual regression effort by **50%**.

Education

Anna University – SIT, Tamil Nadu | *Bachelor of Information Technology*

2007 – 2011

Certifications

Google Cloud Professional Data Engineer

AI Workspace & Tooling

Preferred Developer Workspace & Agentic Tooling

- Leverage **Paseo CLI** for ACP agent orchestration (Codex, Claude Code), alongside Kiro-CLI, OpenCode, and Willow Voice.
- Configure agentic skills (such as superpowers) and custom MCP servers to automate coding, testing, and workspace workflows.
