Professional Summary

- Staff Engineer with 14+ years building distributed systems across backend, mobile, and platform engineering. Own the architecture for Dish Network's subscriber-facing microservices platform ([X]+ **microservices**, [X]M+ **subscribers**) deployed on Rancher-managed Kubernetes, serving the full US subscriber base.
- Cross-team technical influence: promoted **Lead** → **Staff** for driving the Spring Boot 3 migration across all services, standardizing Snyk security scanning org-wide, and pioneering AI-driven engineering workflows (Kiro spec-driven development, MCP integrations) that reduced incident remediation time by [X%].
- Technical leader across hiring, mentoring, and architecture: mentor [X] engineers ([X] promoted), lead architectural reviews and incident response, and participate in senior/staff hiring panels.

Technical Skills

Languages: Java, Kotlin, JavaScript, TypeScript, Python, SQL

Frameworks: Spring Boot 3, Spring Cloud, Hibernate, ReactJS, Next.js, React Native, Android SDK, JUnit

Distributed Systems: Microservices Architecture, Circuit Breaker, API Gateway, REST APIs, API-First Design (OpenAPI)

Infrastructure: Docker, Kubernetes, Rancher, AWS (S3, DynamoDB), Firebase, GCP

Observability & DevOps: Dynatrace, Prometheus, ELK Stack, GitLab CI/CD, Jenkins, Snyk

AI & Automation: Kiro (Spec-Driven Dev), MCP Integrations, Custom Agent Skills, LLM Workflows

Architecture: System Design, DDD, Microservices Patterns, Architectural Decision Records

Professional Experience

Dish Network Technologies

May 2022 – Present

- Promoted **Lead Engineer** → **Staff Engineer** based on org-wide impact: authored the Spring Boot 3 migration guide adopted across [X] services, drove Snyk security scanning adoption across [X] engineering teams, and pioneered AI-driven developer workflows now used by [X] engineers.
- Mentor [X] senior engineers across multiple teams; conduct architectural reviews, lead on-call incident response with post-mortems and runbooks, and participate in senior/staff hiring panels.
- Annual Technical Excellence Award** (2x: 2025, 2024) · **Spot Award** (2x: 2025, 2023) · **CPAW Award**

My Dish App – Subscriber Platform

- Architected distributed microservices using REST APIs and spearheaded the migration to **GemFire** for high-performance distributed caching — reduced data access latency by [X%] and offloaded [X%] of database read load.
- Drove the Spring Boot 3 migration across all services — wrote the migration guide, defined guardrails, and paired with teams to resolve breaking changes. Result: [X%] faster startup times, improved GC behavior, and unblocked critical security patches.
- Integrated Snyk into the CI/CD pipeline and drove adoption across [X] engineering teams. Established a triage and remediation process prioritized by exploitability, reducing critical vulnerability exposure from [X days to X hours].
- Set up structured observability: Dynatrace for APM, distributed tracing, and dashboards for service health, with PagerDuty alerting and documented runbooks. Own the incident response process across [X] services.

Kiro Mobile – AI DevOps Command Center

- Built a mobile app enabling developers to trigger and monitor AI coding tasks from their phones — real-time WebSocket updates, GitLab MR status, and Dynatrace alerts in one view. Deployed to [X] engineers across Dish.
- Created custom MCP servers for GitLab and Jira and authored specialized agent skills (defect-fix, test-generation, code-review) to automate end-to-end incident remediation. Presented at Dish Ignite 2026 (internal AI demo day).

In-Home Service Catalogue App

- Built an offline-first mobile app for field technicians with local content caching — eliminated the need for cellular connectivity during customer visits. Contributed to a [X%] increase in on-site upsell conversion (per sales team data).
- Designed and built a lightweight CMS so the marketing team could update catalogue content without engineering involvement, cutting their publish cycle from weeks to hours.

Dish Paperless Agreement App

- Led the migration of a legacy ColdFusion application to Spring Boot microservices, eliminating chronic production issues and stabilizing subscriber onboarding across [X] regional markets. Reduced agreement processing failures by [X%].

Set-Top-Box Health App (STB Health Monitor)

- Built real-time monitoring dashboards and REST APIs to capture and analyze Set-Top-Box payload data across **10M+ subscriber devices**, empowering field technicians and network operations to proactively identify and resolve issues before subscriber impact.

Internal Tools & Hackathon Projects

- Built 3 internal tools (Asset Management, Shift Allowance, Seat Booking) — full-stack, containerized, with Dynatrace dashboards. Asset Management won **Codefest 2023** and was adopted company-wide.
- Developed responsive, server-side rendered **Next.js** web frontends integrated with RESTful Spring Boot backends, ensuring sub-second page loads and clean separation of concerns.

MSys Technologies (now Aziro) | Technical Architect / Lead

Feb 2012 – May 2022

- Grew from **Software Engineer** → **Senior** → **Tech Lead** → **Technical Architect** over 10 years at an IT services firm ([X] employees). Served US-based clients (Pivot3, Nasuni, NetApp) in storage, virtualization, and cloud.
- Led teams of 3–8 engineers. Owned client relationships end-to-end: scoping, architecture, sprint demos, and delivery. Grew the Pivot3 engagement from 3 to 6 engineers through successful delivery and technical proposals that expanded the scope of work.
- **Best Performer of the Year** (5x: 2013, 2014, 2016, 2018, 2019)

Pivot3 – VMware HCI Platform

- Served as Technical Lead for Pivot3's VMware integration, architecting backend REST APIs, a ReactJS vSphere UI plugin, and a vRealize Orchestrator plugin that automated bulk HCI volume provisioning — reducing provisioning time from [X hours to X minutes].
- Interfaced directly with the US-based product team to drive roadmap alignment and architecture design reviews. Delivered [X releases] on schedule across [X sprints], maintaining [X%] sprint commitment rate.

Enterprise Mobile Apps – Nasuni & Spree

- Led a 3-person engineering team to design and ship two enterprise Android apps on the Google Play Store: Nasuni (cloud storage client) and Spree Wearables (fitness companion).
- Implemented real-time data synchronization using Firebase and integrated analytics (Google Analytics for Firebase) to monitor crash rates and user engagement, reducing crash-free rate from [X% to X%].

Mobitaz & NetApp – Test Automation

- Built Mobitaz, an in-house mobile test automation framework (record and playback across multiple devices). Adopted by the QA team and used in client demos as part of MSys's QA service offering.
- Designed and implemented NetApp's Selenium-based regression test suite, reducing manual regression effort from [X days to X hours] per release.

Education

Anna University – SIT, Tamil Nadu | *Bachelor of Information Technology*

2007 – 2011

CGPA: [X.XX] / 10

Certifications

Google Cloud Professional Data Engineer
