Professional Summary

Staff Engineer with **14+ years** owning end-to-end solution architecture for enterprise platforms—microservices, event-driven integration, data access, security, observability, and cloud-native delivery. At Dish Network, own architecture for the subscriber-facing platform serving **10M+ subscribers** on Rancher-managed Kubernetes, maintaining **99.9% uptime**. Promoted **Lead** → **Staff** for org-wide impact: Spring Boot 3 migration, Snyk security standards, and AI-assisted workflows adopted by **50+ engineers**. Mentor **8 engineers (3 promoted to senior/staff)**; lead architecture reviews, incident response, and senior/staff hiring.

Technical Skills

Languages: Java, Kotlin, JavaScript, TypeScript, Python

Backend, APIs & Gateways: Spring Boot 3, Spring Cloud, Hibernate, REST APIs, OpenAPI/Swagger, Kong / Kong Konnect, Resilience4j, Liquibase, Maven

Architecture & Integration: Microservices, Event-Driven Architecture, Kafka, Confluent Platform (Brokers, Schema Registry, Kafka Connect), RabbitMQ, Circuit Breaker, Service Mesh (Istio/Consul), GraphQL, DDD, ADRs

Frontend & Mobile: ReactJS, Next.js, React Native, Android SDK

Data Databases: PostgreSQL, SQL (query optimization performance patterns), Oracle, MongoDB, DynamoDB, GemFire (distributed cache), Firebase

Cloud, Platform & IaC: Docker, Kubernetes (AKS, EKS, Rancher), AWS, Azure networking (VNet/subnet connectivity, Application Gateway, Azure Firewall, Key Vault, NSG, NAT, Private Link/Endpoint, Private DNS), Terraform (IaC), Helm

DevOps, Quality & Validation: GitLab CI/CD, Azure DevOps, Jenkins, GitHub Actions, Snyk, Dynatrace, Prometheus, ELK, PagerDuty; non-functional validation, performance testing (JMeter, Gatling, SOAPUI, Postman), JUnit, Selenium

AI & Automation: Kiro (spec-driven dev, hooks, subagents), MCP integrations, custom agent skills, LLM workflows, AI-augmented SDLC

Professional Experience

Dish Network Technologies | Staff Engineer (promoted from Lead)

May 2022 – Present

- Define, document, and govern architecture patterns, design guardrails, integration standards, and reusable engineering practices to ensure consistency, release predictability, and compliance across multiple platform and product engineering teams.
- Lead architecture reviews, evaluate technical options, and make informed trade-off decisions to ensure implementation choices align with enterprise architecture, security, scalability, and long-term maintainability goals.
- Promoted **Lead** → **Staff** for org-wide impact: authored Spring Boot 3 migration guide adopted across services; drove Snyk security scanning adoption across **3+ teams**; established architecture review board for platform consistency.
- Pioneered AI-assisted workflows adopted by **50+ engineers** to accelerate delivery velocity; integrated AI review bots into GitLab CI/CD pipelines and automated test generation from specs, reducing production defects by **30%**.
- Lead architecture across **3+ product teams (20+ engineers total)**; mentor **8 engineers (3 promotions to senior/staff)**; maintain structured delegation through Tech Leads, engineering KPI tracking (velocity, defect leakage, release predictability), and capacity planning; maintained **90%+ team retention rate (2022–2025)**; lead on-call incident response with post-mortems and runbooks.
- Annual Technical Excellence Award (2025, 2024)** · **Spot Award (2025, 2023)** · **CPAW Award** — recognized for platform reliability, security posture, and delivery impact.

My Dish App – Subscriber Platform | *Java, Spring Boot 3, Spring Cloud, REST, OpenAPI, GemFire, Kafka, K8s*

- Architected enterprise-grade REST microservices using Java and Spring Boot (API-first / OpenAPI) for the subscriber platform serving **10M+ subscribers**—maintaining **99.9% uptime** with sub-second API latency.
- Led migration to **GemFire** distributed caching to optimize database load and reduce access latency; guided teams on complex SQL query design, database indexes, data access patterns, and performance tuning.
- Established event-driven publish-subscribe patterns using **Kafka** and Confluent Platform (Schema Registry, Kafka Connect) alongside **RabbitMQ** for asynchronous workflows and decoupling.
- Designed and implemented secure integration patterns across frontend (React Native/Next.js) and backend APIs; implemented API gateway routing (Kong), circuit-breaker patterns, and resilience guardrails.
- Built observability and operational readiness: Dynatrace APM, distributed tracing, PagerDuty alerting, and non-functional validation (performance testing using JMeter Postman) as release prerequisites; ensured regulatory and compliance alignment for subscriber data handling.

Sling TV Product Development | *Java, Spring Boot, Ruby on Rails, Microservices, AWS, Amazon Q, New Relic | Dish Network*

- Directed a globally distributed engineering organization (US + India) across **5 squads**; drove delivery predictability by mapping cross-team dependencies, clearing blockers, and establishing escalation paths for execution risks.
- Led strategic transformation of **80+ legacy Ruby on Rails APIs** into modern, scalable Java microservices architecture—achieved **50% faster delivery timeline** by driving API-first patterns and event-driven design.
- Orchestrated end-to-end integration of **Apple Pay** and **Google Pay** payment ecosystems, driving direct organizational revenue growth.
- Spearheaded GenAI modernization: leveraged Amazon Q to reverse-engineer **400K+ lines** of legacy Ruby code and scaffold **2M+ lines** of Java microservices along with **10K+ unit tests** (maintaining **85% coverage**); measured **70% productivity gain** by sprint velocity; optimized cloud infrastructure costs through right-sizing and reserved capacity planning.
- Restructured global delivery models, empowering offshore teams in India to take full ownership of feature execution, significantly increasing throughput and operational readiness.

Paperless Agreement & STB Health | *Spring Boot, REST, real-time monitoring*

- **Paperless Agreement:** Led ColdFusion → Spring Boot microservices migration; eliminated chronic production failures and stabilized subscriber onboarding company-wide.
- **STB Health Monitor:** Real-time dashboards and REST APIs for Set-Top-Box telemetry across **10M+ devices**, enabling proactive ops before subscriber impact.

In-Home Service Catalogue & Internal Tools | *Kotlin/Android, Spring Boot, React/Next.js*

- **Field catalogue:** Offline-first Android app—**40%** lower data usage; contributed to **60%** increase in on-site technical sales; CMS cut content turnaround **70%** (weeks → hours).
- **Internal tools:** Asset Management, Shift Allowance, Seat Booking (containerized, Dynatrace). Asset Management won **Codefest 2023**, **70%** less manual effort, company-wide adoption; guided React/Next.js + Spring REST integration.

Kiro Mobile – AI DevOps Command Center | *React Native, WebSocket, GitLab API, Dynatrace API*

- Built a mobile command center for AI coding tasks—WebSocket live updates, GitLab MR status, and Dynatrace alerts; track AI coding quality metrics (spec drift, test coverage delta, remediation success rate); adopted by **50+ engineers** at Dish.
- Authored MCP servers (GitLab, Jira) and agent skills (defect-fix, test-generation, code-review) for end-to-end incident remediation; presented at **Dish Ignite 2026**.

MSys Technologies (now Aziro) | Technical Architect / Lead

Feb 2012 – May 2022

- Progressed **Software Engineer** → **Senior** → **Tech Lead** → **Technical Architect** over 10 years serving US clients (Pivot3, Nasuni, NetApp) in storage, virtualization, and cloud.
- Led teams of **3–8** engineers; owned scoping, architecture, demos, and delivery. Grew Pivot3 engagement from 3 to 6 engineers via delivery quality and scope expansion.
- **Best Performer of the Year** (5x: 2013, 2014, 2016, 2018, 2019)

Pivot3 – VMware HCI Platform | *Java, REST, ReactJS, vRealize*

- Technical Lead for VMware integration: backend REST APIs, ReactJS vSphere UI plugin, and vRealize Orchestrator automation for bulk HCI volume provisioning (**1000+ volumes**)—**60%** reduction in manual provisioning effort.
- Partnered with US product stakeholders on roadmap, architecture reviews, and release delivery; translated requirements into scalable technical designs.

Enterprise Mobile & Test Automation | *Android, Firebase, Selenium*

- Led 3 engineers shipping Nasuni and Spree Wearables Android apps (Play Store) with Firebase sync and analytics for crash/engagement monitoring.
- Built Mobitaz mobile test automation (record/playback) for client demos; delivered NetApp Selenium regression suite covering **100+ scenarios** and cutting manual regression effort by **50%**.

Education

Anna University – SIT, Tamil Nadu | *Bachelor of Information Technology*

2007 – 2011

Certifications

Google Cloud Professional Data Engineer

[Year – verify expiry]
